Preface

Political stability and social security are seen as the most significant factors which contribute to Cambodia's development in all sectors and foster its economic growth annually. These precisely reflect the ideal and prudent vision of the great leader of the Kingdom of Cambodia, Samdech Akka Moha Sena Pakdei Techo HUN SEN, the Prime Minister, who has envisaged the 4 keys priorities for national development is water, road, infrastructure, electricity and human resources.

Since its inception, the Ministry of Water Resources and Meteorology has been placed under a wise, committed and responsible leadership of H.E LIM KEAN HOR, the Minister of Ministry of Water Resources and Meteorology. In the late December of 2005, International Monetary Fund (IMF) has approved and announced publicly the debt relief, which later took effect on January 5, 2006. With approval of Samdech Akka Moha Sena Padei Techo HUN SEN, the Ministry of Economy and Finance has agreed with the International Monetary Fund to allocate USD 33.35 millions of the total USD 82 millions for the irrigation system development project in the eastern of Cambodia, which was implemented by the Ministry of Water Resources and Meteorology for a term 03 years (2006-2008). The project is aimed to contribute to the government's endeavors in poverty reduction through development of irrigation system to increase agricultural productivity and crops diversification in the eastern area in Cambodia, covering the following 07 provinces: Prey Veng, Svay Rieng, Kampong Cham, Kratie, Stung Treng, Ratanakiri and Mondulkiri. The eastern area is known to receive least investment from development partners in the past years. The project which was completed has resulted in rehabilitation works, small and medium irrigation infrastructure development, and strengthened the capacity of Farmer Water User Communities by provision of agricultural support services to the communities and beneficiaries. In alignment with the target of the fourth mandate government, focusing on maintaining food security and poverty reduction to a minimum, the Ministry of Water Resources and Meteorology has been implementing the water policy in order to increase capacity of irrigation system be further extended, which means that all potential water resources in the Kingdom of Cambodia are utilized to benefit the economic boost and improve livelihoods of people in the region.

Rehabilitation of Irrigation System in Svay Rieng Province of the Eastern Rural Irrigation Development Project (ERIDP) Under International Monetary Funds Debt Relief
