NeuroFood
A Functional Food that supports the Brain and Memory Functions
Net Wt. 165g

Knowledge through brain
A "miracle" food for Alzheimer's and dementia warriors...
Supachai, a Bangkok-based entrepreneur...
The beauty of his "miracle" food, made by Melon Food Tech Co., is that it is derived from the essence of natural grains, such as rice, corn and sorghum, using hydrolysis to create polysaccharide peptide (PSP) as the main ingredient...
"I have been proven to help raise the sugar level in the body, act as an antioxidant, reduce blood stress, help the digestive system and enhance one body's immunity. Moreover, PSP helps slow the aging process and prevent Alzheimer's disease," he said.

Supachai, launched in the United States about six months ago, has already brought in an estimated \$100 million. It operates some of the highest added margins among imported nutraceuticals, since the raw materials are mostly indigenous.

Supachai said he is also planning to produce a Viagra equivalent made from turmeric, a natural herb, as well as a memory-aid pill from another herb, ginseng, for healthy men over 40 and abroad.

"My mission is to help Thais get rich," he said in an interview to coincide the country's trend of scientific knowledge with traditional wisdom.

Former research scientist at ICI Asiatic Co., he was recruited by Bangkok-based Melon, one of the country's fastest growing companies, in 2000 to spearhead the government's drive to boost national competitiveness through innovative development.

Supachai's agency signed three agreements with an initial government budget of \$100 million.

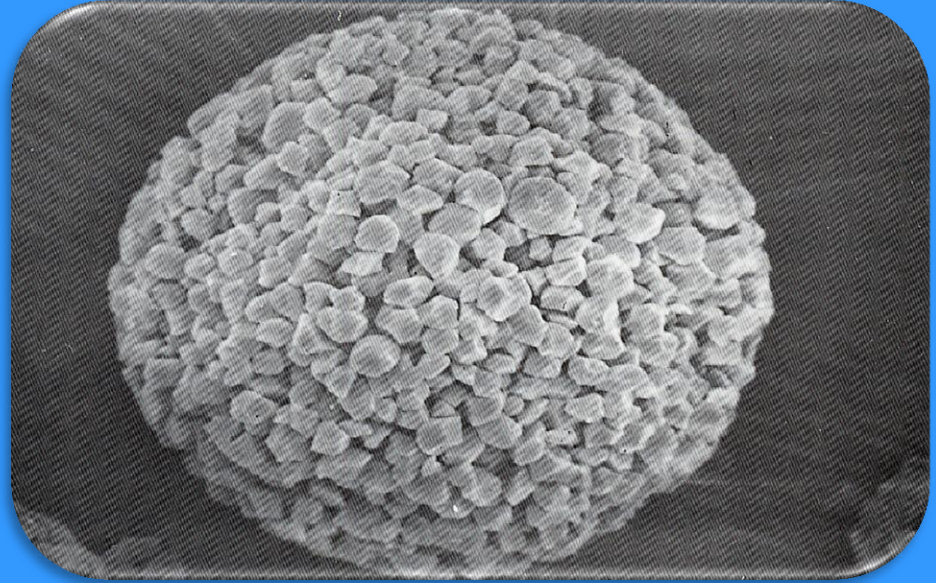

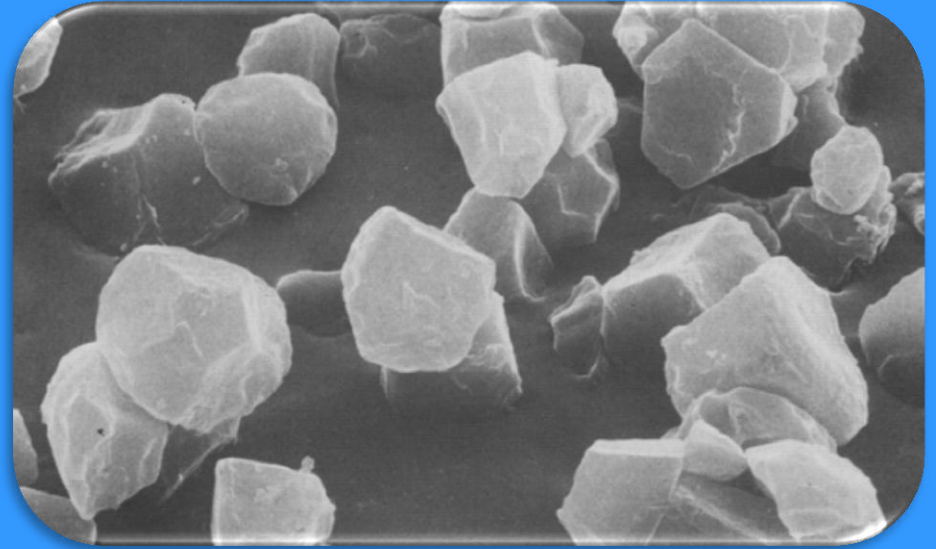

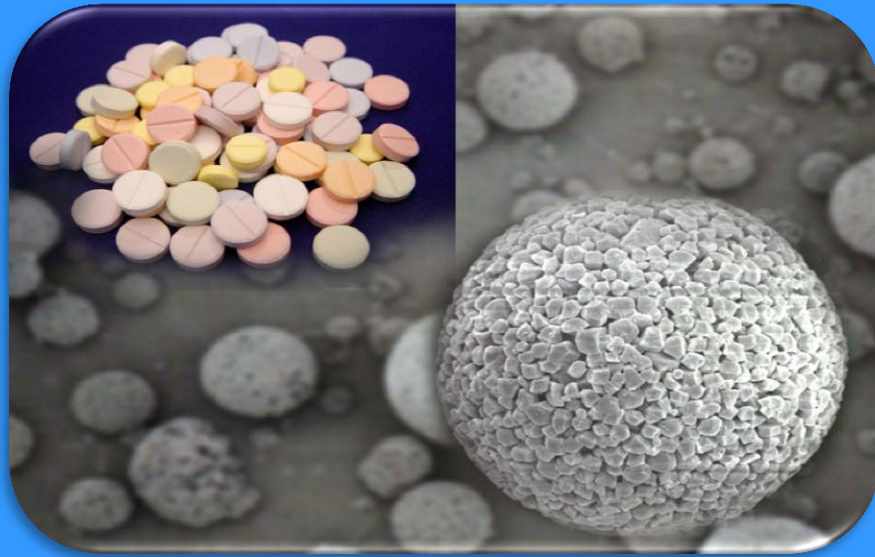

"I have used to be three or four kinds of rubber sheets whose quality was not uniform. We've changed that to a good extent. As a result, we're now in the process of producing high-quality biological warfare masks from indigenous rubber to satisfy the US army."

So ideas [2A]

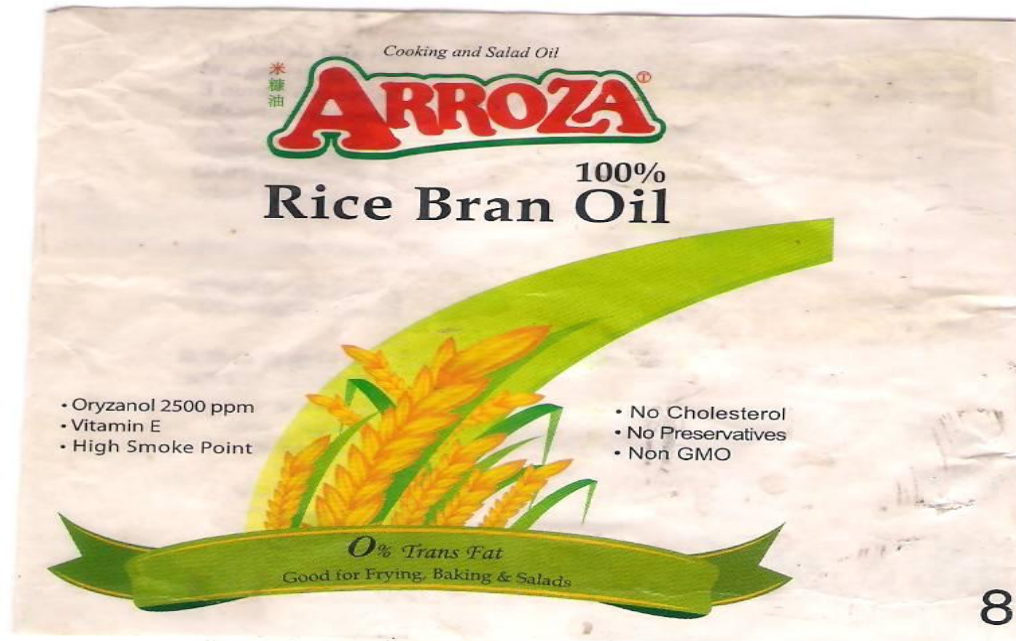

Innovation is to use knowledge to make money. Such knowledge comes from good research, which costs money. In other words, innovation is the critical step towards increased productivity.
